Department of Botany has organized a study tour in Sainagar Ranjani during 2018-19. Department had published a notice of study tour for B.Sc. F. Y., S.Y. and T. Y. year students on 08/02/2014. Tour was organized on 8<sup>th</sup> February 2019 by the permission of principal, As Dr. Kunal Badade Kai. Rasika Mahavidyalay Deoni. It was attended by Male and Female Students. Tour was started after flag hosting towards “ **Karusa, Ausa and Sainagar Ranjani** ”.

## 1) KARUSA CITY

**Kharosa is a village historical cave** situated at about 45 km from Latur City in Latur district, Maharashtra, India. The place is renowned for its caves, which were built around the 6th century. Other attractions include the beautiful sculptures of Narasimha, Shiv Parvati, Kartikeya and Ravana. There are about 12 caves, of which one has an image of seated Jain Tirthankar. There are about a couple of dozen carved panels depicting mythological stories. The second cave has a shivling and is visited by a lot of people for blessings while there is the Renuka Devi Temple on the other side of the hill which is also visited by tourists and local people. The 4th and the 5th caves have two floors and the ground floor is constructed just below ground level from where the middle floor can be accessed.

The upper hall of Kharosa Caves that can be reached through a narrow staircase has a number of Vishnu and Shiv-Parvati idol and you will be simply fascinated with the unique charm of history and heritage.

At Kharosa Caves there is a source of water on the top side of the hill known as Seeta Nhani or Seeta's Bathroom and is also a popular destination for the tourists. I can be visited almost throughout the year, but it is during the winter months when the weather is

most convenient for a visit. As I can be easily reached by car tourists and pilgrims from all over the country visit my caves throughout the year including the monsoon.

Nearby villages are: Ramegaon, Kharosa, Shivani. The upper side of the hill you will find Renuka devi Temple and a Mosque side by side which shows the unity of Hindus and Muslims in the area. Everyone who comes to visit the temple also visit the mosque. Villagers nearby are very co-operative and helpful.

Route: The nearest major railway station is the Latur Railway Station, on the Latur-Miraj rail route. It is about 45 km from Latur on Latur-Nilanga Road via AUSA-Lamjana. Car can go up to the caves on the left flank and up to Devi Temple on right flank of a small hillock. Regular buses which connect Kharosa with Latur and Nilanga/Udgir.

As per the syllabus of B. Sc. F.Y., students studied different type of leaves, stem, root, flowers, inflorescences and fruits. Different water plant Algal members were studied in Karusa cave. The students have also observed mushrooms and Bryophytes and Pteridophytes on old "Mahadeva Temple" Temple wall.

B.Sc. S.Y. Students were familiar with different families' of plant described in syllabus. They studied names of genus and species of different plants. They have also observed water ecosystems and different types of Hydrophytes, Xerophytes and Mesophytes grown in Mahadeva Temple and sides.

B.Sc. T.Y., students were studied diseases on crop plants. Some common diseased materials was collected and brought to

laboratory and studied to their respective organisms and also prepared the herbarium.

## 2. AUSA CITY

**Shri Keshav Balaji devasthan** was established in the year 2014 and is built in the city of AUSA located near Latur District of Maharashtra. The temple is surrounded by hills. There are four other temples of Lord Ganesha, Lord Shiva, Lord Vitthal & Goddess Rukmini and Keshavanand Babu in the same premises. The temple opens at 6:00 am and closes at 9:00 pm. Different Sevas are performed throughout the day. There is Prasadam at 10:00 am & 7:00 pm for the visitors every day. Mahaprasadam is held every Friday in between 10:00 am to 6:00 pm. This Temple is a part of the project named 'Dharma va Sanskar Nagari... Shri Maa Kankeshwari Devi Residency'.

## 3) Sainagar Ranjani

**Natural Sugar and Allied industries Ltd., Tq. Kalam, Maharashtra Sainagar Ranjani.** Natural Sugar & Allied Industries Ltd. is located in an area of abundant raw material i.e. best quality sugar cane. Its operational area is within 50 kms. Having 263 villages only. Due to excess cane (high yield sector) there was less demand and lower prices to this cane. Thus, no demand, no price, frustrated the farmers. All these conditions necessitated the strong will for establishment of Natural Sugar. It is located at the 100% perennial area of Manjara Dam, which is 15 kms below the dam location. The area within 30 kms is irrigated by right and left canals of Manjara Dam, right and left bank river water and Raighavhan medium project. Hence, the availability of best quality cane is assured even in the draught condition also.

Natural Sugar is a public limited Company registered under Indian Company Act. 1956. It is the first sugar plant completed in February 2000 in a shortest span of 9 months and at the lowest cost of Rs. 20.00 crores with the strong financial support from farmer members by contributing 11.00 crores as share capital and Rs.9.00 crores as a term loan from The Vaidvanath Urban Co-Operative Bank Ltd., Parali Vaidyanath with other urban banks in consortium.

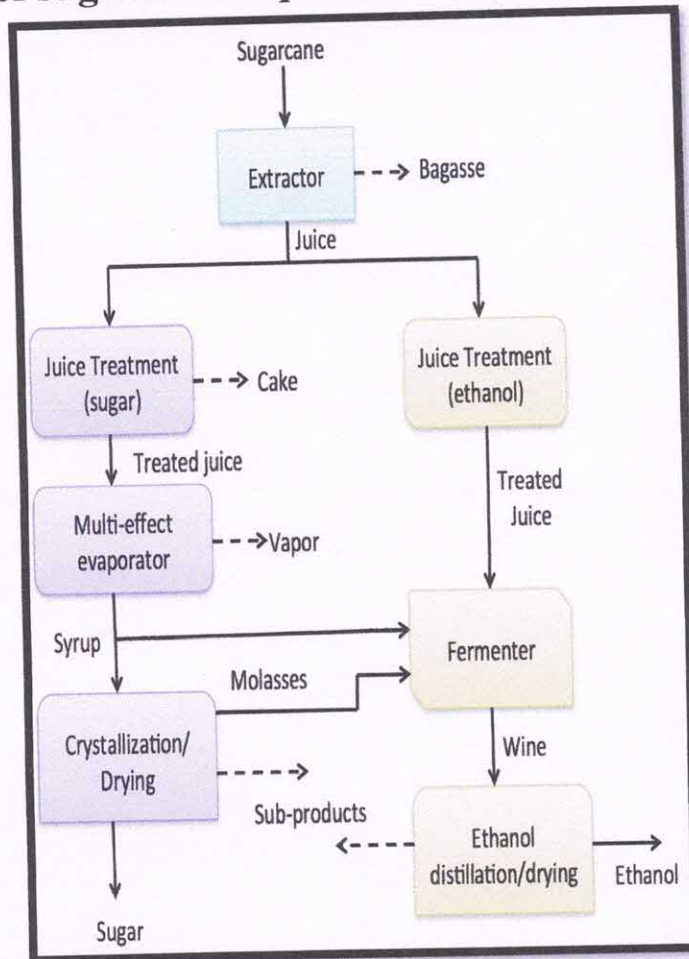

- A) Production of ethanol from corn will be discussed in the next section; this section will focus on sugarcane ethanol production. So, what needs to be done to get the sugar from sugarcane?
- B) The first step is sugarcane harvesting. Much of the harvesting is done with manual labor, particularly in many tropical regions. Some harvesting is done mechanically. The material is then quickly transported by truck to reduce losses.
- C) The cane is then cut and milled with water. This produces a juice with 10-15% solids from which the sucrose is extracted. The juice contains undesired organic compounds that could cause what is called sugar inversion (hydrolysis of sugar into fructose and glucose). This leads to the clarification step in order to prevent sugar inversion.
- D) In the clarification step, the juice is heated to 115°C and treated with lime and sulfuric acid, which precipitates unwanted inorganics.
- E) The next step for ethanol production is the fermentation step, where juice and molasses are mixed so that a 10-20% sucrose solution is obtained. The fermentation is exothermic; therefore, cooling is needed to keep the reaction under fermentation conditions. Yeast is added along with nutrients (nitrogen and trace elements) to keep yeast growing. Fermentation can take place in both batch and

continuous reactors, though Brazil primarily uses continuous reactors.

F) Shows a schematic of one process for ethanol production along with the option to produce refined sugar as well. Sugarcane contains the following: water (73-76%), soluble solids (10-16%), and dry fiber or bagasse (11-16%). It takes a series of physical and chemical processes that occur in 7 steps to make the two main products, ethanol and sugar.

G) Process of sugarcane to produce ethanol and sugar.

H) Figure 7.4: Schematic of process of sugarcane to produce ethanol and sugar.

Department of Botany has organized an educational study tour in during 2019-20. Department had published a notice of study tour for B.Sc. F. Y., S.Y. and T. Y. year students on dated 10/02/2020. Tour was organized on 20<sup>th</sup> February 2020 by the permission of I/C principal, As Dr. Bhande, P.S. Kai. Rasika Mahavidyalay Deoni. It was attended by Male and Female Students. Tour was started after flag hosting towards “ **Kharosa , Naldurg and Akkalkot** ”

1) **SVC CO-OPERATIVE BANK LTD. LATUR BRANCH “ARCHNA FLOUR MILL”**  
**KHAROSA VILLAGE :- steps of wheat milling process**

Wheat

The wheat milling process involves separating the wheat grain into its constituents that is the germ, bran, and endosperm. It follows the steps below. However, wheat milling is more complex than is conveyed by this simplified view. Preparing the wheat; The wheat is weighed, inspected then graded. The grain is separated by size, shape and weight.

### **Cleaning;**

Here, the wheat is cleaned to remove impurities such as sticks and stones and other coarse and fine materials. The whole pure wheat is then passed for further processing into the conditioning bins.

### **Tempering and conditioning;**

At this stage in the wheat milling process, soaking of the wheat in water takes place for easy removal of the bran. Conditioning is done before milling to ensure moisture content is uniform throughout the grain. Moisture helps to prevent the bran (outer layer) from breakage during milling.

### **Gristing;**

Gristing refer to the blending of conditioned and cleaned wheat. At this stage different wheat batches are mixed to create the required specific kind and quality of flour.

### **Separating;**

The grist goes through a series of rolls rotated at various speed levels. The rolls only split the wheat grain open to separate the inner white portion form the bran.

### **Milling;**

The wheat is ground by a machine that crush it into pieces. It is then put through sifters from which the meal obtained starts out course. With repeated grinding and sifting, the meal becomes fine flour, wheat germ and wheat bran. These can be sold separately, used to produce different flours or used together to produce whole meal flour.

### **Blending;**

Here, constituents are mixed together to produce different flours. For instance, a blend of wheat bran and white flour produce whole wheat flour.

### Different types of flour

- **White flour** is produced from early rolls. The flour gets less white on later rolls with the increased amount of bran particles.
- **Brown flour** is produced as a mixture of the other streams and white flour.
- **Whole meal flour** is produced when all the other streams are mixed back in their original quantities. The left over wheat feed and brans are sometimes used in animal feed and breakfast cereals.

It should be noted that the flour types to be produced are affected by the different qualities of wheat going into the mill. Millers can ensure further feature variations such as flour colour by mixing together the different streams of flour produced by the mill.

### Types of Flour

Flour Types	Usage
•Bakers Flour	•Pan Breads, Roll & Buns (automated bakeries)
•All Purpose Flour	•Pizza, French Breads, Arabic breads
•High Extraction Flour	•Tandoori Bread, Chapati & Puri
•Soft Flour	•Cake & Biscuits
•Whole Meal Flour	•Whole Meal & Brown Bread
•Semolina	•Pasta & Sweets
•Pre-Mixes	•Specialty Breads & Cakes

from mother's womb. According to one story he appeared mysteriously as an eight year old boy at Chele town near Hastinapur in north India. In another Shri Narasimha Saraswati went to Badri Forest where he stayed in the Samadhi for about 350 years and he was woken up by a woodcutter. There may be two known versions about the place and the year of Swami's appearance, but all the authors agree on the day of his appearance which was the second day of Chaitra month or the day after the Gudi Padwa. Gudi Padwa is the newyear day in the Shalivahan Shaka. It is the Tithi of Chaitra Shuddha Dwitiya (चैत्र शुद्ध द्वितीया). There is no disagreement on this.

According to Swamisut, whom Swami Samarth considered as his son, Swami Samarth first appeared in the village of Chelikheda about 24 miles from Hastinapur (Hastinapur is about 100 km north-east of Delhi on the banks of the River Ganga) on the second day of Chaitra month or the day after the Gudi Padwa as an eight year old boy who appeared after breaking of the ground. This is mentioned in the scripture/manuscript written by Swami-sut (Haribhau Tawade) and named as "Swami-Prakat-kand" (story of Swami's appearance). ry of Swami's appearance).

This is also according to the horoscope prepared by Mr.Nana Rekhi from Ahamadnagar who was a Swami Bhakta and an expert Pingala-Jotyshi (astrologer). This horoscope was approved by Swami Samarth himself. Chaitra Shuddha Dwitiya is celebrated as "Prakatdin" i.e. day of manifestation, at the Swamisut Math in Chembur Mumbai. Some of Swami's devotees like Mr Hanmante, author of "A Glimpse of Divinity: Shri Swami Samarth of Akkalkot", Nana Gadre and Shakatai Agate have confirmed that Swami Samarth manifested as an eight year old boy near Hastinapur on Chaitra Shuddha Dwitiya. According to Shri Anandnath Maharaj Swami Samarth manifested near Himalayas under a banyan tree on this day.

It is mentioned in the holy book of Shri Gurucharitra that Shri Narasimha Saraswati (the 2nd Avatar of Lord Shri Dattatreya) went to Kardalivan located at the foot of Shreeshail Mountain in 1458. Later he is said to have left Kardalivan and went north to Badri Forest where advanced Yogis go for meditation. He spent several years there and entered into Mahasamadhi. In the course of time his body was completely covered by anthills. Anthills are common in forests and since it is believed that they are the abodes of snakes people generally do not go near them or disturb them. Thus Shri Narasimha Saraswati was left undisturbed.
